

MIZUNO HELMET MODIFICATION POLICIES

Decal Policy

The application of pressure sensitive decals and labels onto Mizuno helmets does not have a detrimental effect on the helmet when used with smaller decals and applied without additional adhesives or coatings.

There are some adhesives used on pressure decals that can attack the polymer used in Mizuno batting helmets if large decals are placed on the helmet.

Mizuno approves the use of pressure sensitive decals on helmets for team logos and player numbers as long as the size of the decals does not exceed 20% of the surface area of the helmet.

The decals should not cover the Mizuno logo, warnings, date of manufacture, or NOCSAE logo. The covering of this information would void the NOCSAE approval of the helmet.

Mizuno does not approve the use of additional adhesives to attach the decal or the use of an additional coating to the decals. The use of additional substances to the decal may alter the properties of the helmet shell material.

The use of decals outside of the stated policy will void the Mizuno warranty.

Paint Policy

Mizuno does not endorse, recommend or approve of any additional painting, clear coating, or airbrushing of the batters helmets. Some paints can cause shell deterioration, which would adversely affect player safety. Mizuno helmets are offered in multiple paint variations and are NOCSAE certified using only Mizuno approved coatings.

The use of additional coatings will void the Mizuno warranty.
